Maria Roberta
Araujo Möller

**Full Stack Developer
& UX/UI Designer**

I'm **Maria**, a Junior Full-Stack Developer passionate about technology, learning, and cultures. I love new challenges and I'm always pushing myself to get new knowledges, I've already learned **5 languages** and decided to learn technology languages entering in the bootcamp School of Code. My **background** in **Architecture** helps me to **solve problems with creative solutions** and with nice designs. As a **Project Manager**, improved **motivation on teams** and helped them to be **more organized, prioritize tasks** and worked with the **agile methodologies** adapting MVPs and schedules.

Heroku   Netlify   Jest   Cypress   Postman

Photoshop   Illustrator   Jira   MS Project   Miro

Soft Skills

Empathetic, Communicative, Creative, Organized.

EXPERIENCE

Full Stack Developer & UX/UI, School of Code
Apr 2022 - Aug 2022 - 4 months, London, UK

Completed 16 weeks of the School of Code, a fast-paced intensive programming boot camp, focusing on learning with real experience of the market, during all the course I did pair programming and delivering every week a new project. I've learned HTML, CSS, JavaScript, React, Next.js, Node.js, Express, PostgreSQL, NPM, REST APIs, and also some soft skills such as presentation, and mindset to know how to work with different types of people.

- ### Reconnect - Self-care App
  Final project - 1 Month - Group of 5 people

  Developed a full stack self-care app that helps to keep track of your mood and thoughts, as well as to promote different activities to help develop healthy habits. On this project I applied all my knowledge adquired on the bootcamp, innovated with the **UX and UI design**, researched market and users, created many of the **React** components and states, **responsible CSS** and **Next.js** pages, inicialized the backend and connection between the frontend and database. As a mobile first design we used **PWA**, to users be able to download the app on their phones. During the month we used **agile methodologies**, **prioritazed tasks** and we did the **project planning & management on Jira** and trello. Practice and developed cooperation, problem solving and decision making in a larger dev team, pair and mob programming when necessary . Frontend was deployed on Netlify and backend on Heroku. Tested with Jest, supertest and Cypress.

- ### Code Club Dashboard
  1 week project - Group of 4 people

  Conceived an app to help students support each other in their learning journey. The bootcampers could choose the subject they would like to revise and register their interest on the dashboard. If they would like to guide others, they could adding their name and availability on the "Volunteer to help" section. Braimstorming, **personas**, **user journey** were created on Miro and **wireframes** designed in **Figma**. We managed the tickets on trello, we used **Javascript** in React and used PostgreSQL and Heroku for backend.
